EDUCATION

Galgotias University

Bachelor of Technology in Computer Science

Greater Noida, India

2022 – 2026

EXPERIENCE

AI Engineer - FTC

May 2026 – Present

InfoEdge

Noida, India

- Automated career page onboarding via end-to-end LLM pipeline with headless Playwright interceptor and self-healing validation loops. Reduced manual setup time by 96% (65+ days/month saved).
- Engineered multi-agent taxonomy classifier: Birch clustering + batch processing + three-layer Auditor (exact match → fuzzy → vector similarity). Standardized 31k+ raw skills into canonical taxonomy with 98% accuracy.
- Designed resilient data pipelines with SQLite state machines and human-in-the-loop validation gates. Achieved 99.9% uptime during bulk processing; systems resumable from failure without data loss or token waste.

Product Intern

March 2026 – April 2026

Times Internet

Noida, India

- Worked with the ET team on product initiatives for Soonicorns 2026, contributing to feature development, user experience improvements, and end to end product workflows.

Full-Stack AI Intern

June 2025 – Dec 2025

Paytm

Noida, India

- Built AI based tools using Python, FastAPI, and GenAI, enabling workflow automation, improving API reliability, optimizing operational costs and performance while reducing manual effort for 3-4 team members.
- Owned and built an AI product (Mini.AI) end-to-end, from problem discovery to deployment, focusing on user workflows, system design, and delivering a functional MVP.
- Handled a Large Scale Freshdesk-to-Jira migration across instances, contributing to a cost reduction of 92%.

Summer Intern

June 2024 – Aug 2024

Future Crime Research Foundation

Greater Noida, India

- Worked with the analytics team to understand forensic tools, OSINT techniques, and digital evidence analysis while gaining exposure to cyber incident analysis, AI in Cybersecurity and forensic documentation.

PROJECTS

Mini AI

Completed

- Built a multi-LLM orchestration platform (GPT, Claude, Gemini, Hugging Face) enabling users to interact with models within a unified interface.
- Enabled custom agent deployment for domain-specific workflows (e.g., HR bot) with collaborative integration.
- Implemented document intelligence pipelines for semantic querying across PDFs, images, and text with persistent contextual memory.
- Designed core product features: session awareness, memory, chat history, deep research, and online search.

Orca OS – AI Operating System Wrapper

Ongoing

- Built an AI system converting natural language instructions into executable Linux commands via intent-to-command engine.
- Developed multi-step execution capabilities for system task automation (file management, process control, etc.).
- Research paper accepted at conferences; actively iterating with new features.

SKILLS

Languages: Python, Java, SQL

AI & Machine Learning: Deep Learning, NLP, Generative AI, Agentic AI, Computer Vision, Retrieval-Augmented Generation (RAG), Vector Databases

Frameworks & Tools: FastAPI, TensorFlow, OpenCV, Hugging Face, Scikit-learn

Product & Design: Product Thinking, User Journeys, User Flows, MVP Development, Feature Prioritization

Systems & Engineering: System Design, API Design, Backend Development, Docker, Kafka

Tools & Platforms: Git/GitHub, AWS (EC2, S3), Postman, VS Code, Figma, n8n, Jira
